

OUR GROUP

STRATEGIE WORD FLIGHT COVID 19

Since the beginning of the Covid-19 crisis, a great outpouring of solidarity and generosity has been created around the world to fight this pandemic. We have taken concrete steps to help all countries cope with this difficult period in terms of prevention and vaccination. All countries have a vaccination strategy in place for their populations. Different vaccines have been developed to fight this COVID 19. The cost of purchasing vaccines by governments is financially acceptable to a small number of countries. The current policy is to vaccinate everyone. We do not want to interfere in the scientific and/or political decisions of each of the countries with which we are currently working. We propose a simple strategy to put in place, declutter medical services identify the asymptomatic and on scientific advice bring immunity approach 100%. NOTRE STRATEGIE SWFCOVID19 Notre stratégie est basée sur la vaccination des populations qui en ont vraiment besoin et la réalisation d'une vaccination efficace.

The self-test prior to applied to the entire population of the country will detect people who are immunized and asymptomatic (up to 30% of the population) the vaccine can then be administered to the rest of the population.

the Urine anti body test sars 2

RESULT 15/20 Minutes

A QR code is on each test - We offer an application to health authorities to immediately collect the results (positive, asymptomatic, natural antibodies against the virus, ...) from the entire population

+

OUR GROUP

Asymptomatics The term asymptomatic refers to the absence of symptoms. It can apply to an individual, a disease, or even a stage of a disease. A symptom is a sign of illness, such as having a fever or coughing. One might therefore think that the asymptomatics are not sick: this is not true. An asymptomatic is a patient who does not know. As an asymptomatic person will often be able to transmit a disease, even if he or she himself does not suffer the consequences. At least not right away! Indeed, some diseases have a long asymptomatic stage, which delays its detection, before becoming symptomatic several years later.

- The Global Problem of Health Authorities Today

In each country the virus circulates and mutates to a stronger and faster contagion. The number of tests in each country is not enough to map in an instant that is carrier and that is not carrier. These tests are carried out only by health personnel, the number of health personnel is not expandable in the world to carry out these tests. The delays in the results are long, even the antigenic test, which gives a result in 15 minutes can not meet the need to test populations very quickly in large numbers. Problem of health personnel and supply of tests. The unknown problem: ASYMPTOMATICS, which represent a significant amount in the world. Les populations du monde entier ont besoin d'être rassurées sur leur état de santé.

The only questions that will need to be answered:

- WHO IS A CARRIER WHO IS NOT?
- CAN WE VACCINATE EVERYONE? NO (vaccine is not mandatory)
- WE ARE PERSONNEL FOR TEST AND VACCINER 7,800,000,000 human beings? **NO**
- ARE WE IN A RACE AGAINST TIME? **YES**
- ARE MUTANT VIRUSES PRESENT? Yes
- CAN THE POPOPULATION OF EACH COUNTRY TEST ITSELF AND MEASURE ON IMMUNITY TO THE VIRUS? A PRESENT **YES**
- CAN ASYMPTOMATICS AROUND THE WORLD BE IDENTIFIED? A PRESENT **YES**
- WILL COUNTRIES BE ABLE TO SPEND LESS ON BLIND VACCINATION? **YES**

WHY NOW YES?

HERE'S THE COMPLEMENTARY RESPONSE TO THE CURRENT VACCINATION

OUR GROUP

SARS-CoV-2 Urine Antibody Rapid Test

Available in two sizes and always individually, crates and strips, are THE ONLY AUTO Tests on the market to test WITHOUT BEING A HEALTH PERSONAL in a way that boosts your immunity, whether you are ASYMPTOMATIC or NO-ASYMPTOMATIC.

This will give authorities immediate mapping of people with the virus and mutant viruses and determine their vaccination strategy.

Urine has already been used to detect immunity to other viruses such as rubella, HIV2 and to assess vaccination of certain diseases. Although the concentration of physiological immunoglobulins is low compared to that of blood, the OLISACARE patent allows this biological medium to be used to establish people's immunity to SARS-CoV-2. Our Auto-experimental will let you know if you have the antibodies so that you know if you are immune and non-contagious.

The human, economic and social cost of COVID 19 encourages us to take all necessary measures to eradicate this scourge. Thanks to the Complementary Vaccination Test, deconfinement is possible. If you are immunized, you are not contagious, you can return to the normal course of your life safely while respecting all government precautions.

OUR GROUP

The SARS-CoV-2 antibody test (lateral flux method) is an immunochromatographic test for the rapid and qualitative detection of coronavirus 2 severe acute respiratory syndrome (SARS-CoV-2) antibodies in a human urine sample. The test should be used to assist in the diagnosis of coronavirus infectious disease (COVID-19) antibodies, which are caused by SARS-CoV-2. The test provides preliminary results immediately (15 minutes)

TEST A HOME WITHOUT A HEALTH PERSONNEL The URINE test device OLISACARE COVID-19 is an immuno-chromatographic dosing kit for the rapid detection of immunoglobulin G (IgG) against THE OCOVID-19. This test is intended for use by the general population, people with suspicions of possible COVID-19 contamination, or having been vaccinated. The only recommendation that is to do the test with the 'First morning urine, undiluted' must be scrupulously respected.

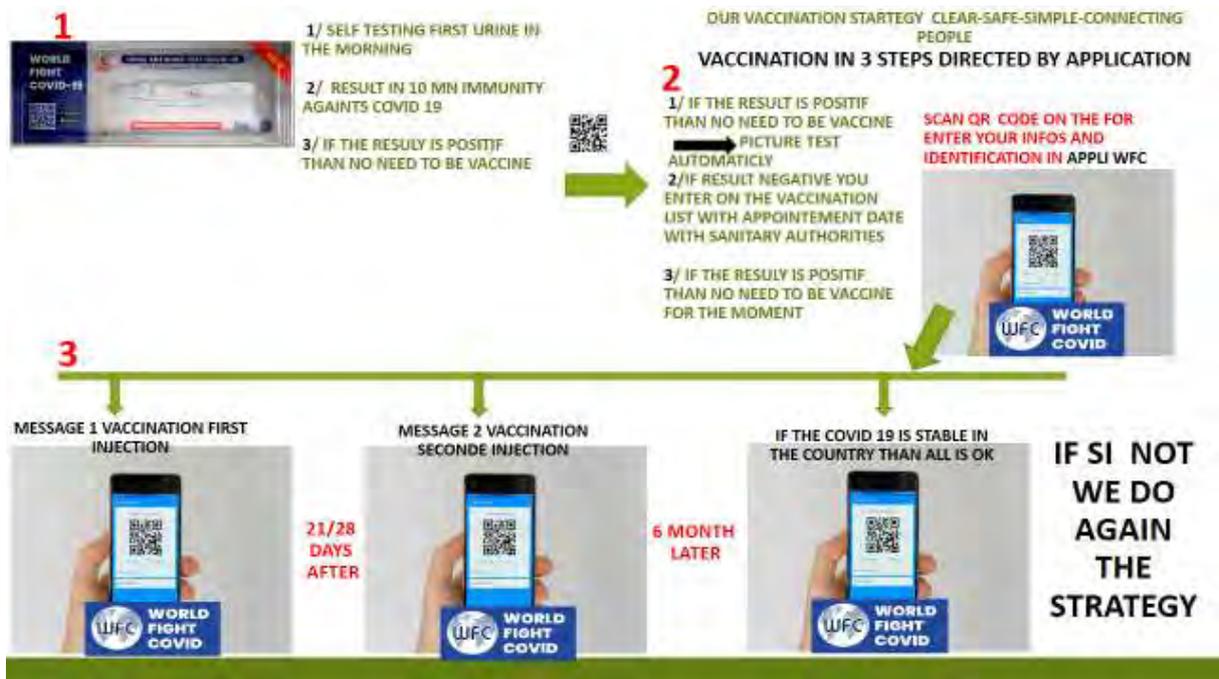

Morning urine only, undiluted, unfrozen. Test to be performed within two hours of urine collection

OUR GROUP WHY do this test?

- ✓ Reassure those performing essential functions in at-risk or confined environments by offering them reliable and fast self-testing, which is regularly performable to ensure their immunity.
- ✓ Accelerate progressive decoming safely by allowing people to test positive, thus immune and non-contagious, to move freely
- ✓ Opportunity to put a QR code on the tests for the exit certificate to justify freedom of movement in case of reconfinement.
- ✓ Mass use for a T-moment census of the ALL WORLD rate of past infection and present immunity of the population to refine forecasts, modulate containment, and save on unnecessary tests and vaccines in case of immunity.
- ✓ Avoid additional costs for CPMA's already heavily impacted by the pandemic.

OUR GROUP

AstraZeneca has developed a vaccine with Oxford University to preserve it at 20C. It meets the world's health names. AZD1222 uses a replication-deficient chimpanzee viral vector based on a weakened version of a common cold virus (adenovirus) that causes infections in chimpanzees and contains the genetic material of the advanced SARS-CoV-2 virus protein. Among participants who received two standard doses, the vaccine was 62% effective (95% CI 41-75) chAdOx1 vs. 6% in the menACWY-vaccinated control group. Among participants who received a low dose followed by a standard dose, efficacy was 90% (67% 97%)

Before any vaccination do the urine test will bring effectiveness to the vaccination policy and will reassure people around the world.

Just for example: Turkey

TURKEY CORONAVIRUS URINE ANTIBODY TEST + VACCINE
WFC DISTRIBUTOR REPORT SOME NUMBERS

OUR GROUP

DETAILS CORONA VIRUS IN TURKEY

- **DETAILS CORONAVIRUS IN TURKEY**
- **Updated numbers February 5th 2021**
- Total Cases: **2 564 527 = 3 % of the population**
- Total Deaths: **27 187 = 0.03 % of the total cases**
- **We propose with our industrial partners a simple strategy to implement, relieve congestion in the medical services, identify the asymptomatic (unknown for the moment by the health services). Using the covid 19 antibody urine test, the authorities will have a precise mapping of the organization of the vaccination of the Turkish population**

OUR STRATEGY URINE TEST ANTIBODY(QR codeAPPLI WCF) + VACCINE

TURKEY POPULATION 2020

- Total **85 464 551 TURKEY**
- Growth rate of the population 2020 = **1,68 %**
- Medium age = **31,9 years**
- 0-14 Years = **24,26 %**
- 15-64 Years = **67,96 %**
- 65 Years and more = **7,79 %**

OUR GROUP

TURKEY 2021

- Population that can received Covid vaccination = 75 % so total around 64 098 413 peoples
- For reaching an collective immunity = +/- 50 %
- Total population valid for vaccination
- TURKEY 32 049 206

STRATEGY WITH THE SELF URINE ANTI BODY TEST SARS 2

- 1/ LOGICAL AND SECURITY STRATEGY: URINE SELF-TEST ANTIBODY FOR TURKEY
- 2/Asymptomatic discovery and people naturally immune
- HEALTH SERVICES HAVE AN ACCURATE MAP OF THEIR IMMUNIZATION POLICY - FOR THE FIRST TIME HEALTH SERVICES HAVE IMMEDIATE VISIBILITY OF ASYMPTOMATIC PEOPLE, IMMEDIATE VISIBILITY OF PEOPLE WITH NATURAL ANTIBODIES TO FIGHT COVID19 VIRUS.
- VACCINATION

OUR GROUP

STRATEGY WITH THE SELF URINE ANTI BODY TEST SARS 2

- To detect the population that are naturally immunize against Covid-19 with our URINE SELF ANTIBODY TEST = +/- 30 %
- 64 098 413 Candidate to vaccination
- Urine Antibody Test : 30 % Natural immunity = 19 229 523
- TURKICH to vaccine 70 % = **44 868 889 ONLY**

STRATEGY AND ECONOMIC RESULT

- The TURKICH Government need 64 098 413 Urine Antibody SELF Test
- The TURKICH Gouvernement need **44 868 889 ONLY**
- Vaccine X 2 doses to vaccine after 21 days = 89 737 778 doses
- **ECONOMIC AVANTAGE WITH THE TEST ONLY AROUND 89 737 778(2 doses of vaccine).**
- This unique strategy helps refine and help health authorities be truly effective against the virus
- ****BEFORE THIS STRATEGY YOU NEED 128 196 826 DOSES**

OUR GROUP

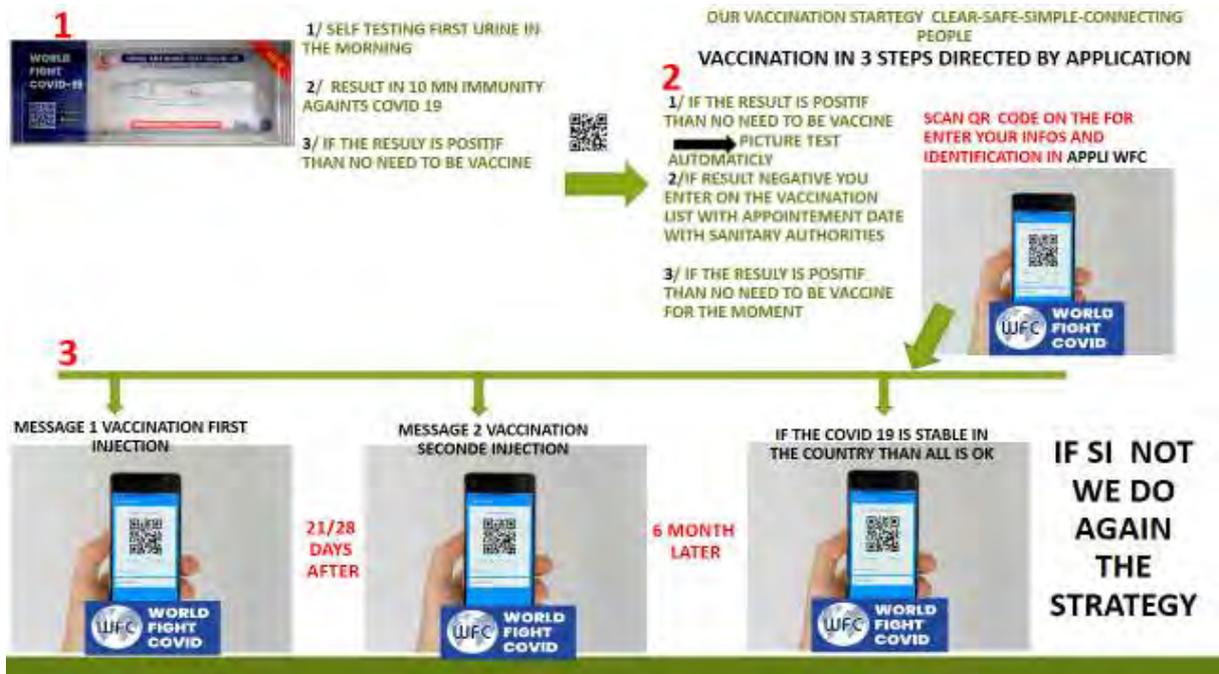

THE SELF URINE ANTI BODY TEST SARS 2

**RESULT
15/20
Minutes**

A QR code is on each test - We offer an application to health authorities to immediately collect the results (positive, asymptomatic, natural antibodies against the virus, ...) from the entire population

OUR GROUP

*A PRACTICAL test
easy to use for everyone!*

Health authorities receive immunity information immediately, they begin their treatment and vaccination strategy, the application is tailor-made for the country and managed by the official health authorities.
